RALEIGH

A WORLD OF BIKES
FOR EVERY INDIVIDUAL

1998
They reckon that more than three quarters of all bikes sold are doing what they shouldn't be doing. Sitting still.

They're not stuck in traffic, but their owners are stuck because they bought a bike that didn't quite suit its purpose. Like buying a pair of wellies to wear to the office in summer.

So we'd like to help you make sure that the bike you're looking for is the Raleigh you need.

Every single one of our bikes is designed specifically for its purpose. So if your Max handles mud and rocks like a dolphin handles water, don't be disappointed if those big tyres get you tired on tarmac.

Just as a racer that cuts through air like a razor will be out of its depth on a bumpy canal towpath.

Of course, whatever level of performance you're expecting from your bike, you'll find a Raleigh that delivers it in spades.

That's what we mean when we say that we have a world of bikes for every individual.

Welcome to our world.
HOW TO CHOOSE

There’s a Raleigh bike for every purpose, and the bike you choose depends on where – and how – you want to ride it. So pick your terrain and find the bike that suits you best.

AWAY FROM IT ALL

When you’ve won five consecutive British mountain bike championships, you’re at the peak. Then again, that’s what our bikes are designed to provide – peak performance and handling that’s high above anything else you’ve ever ridden. Add in a component package that’s higher than you could possibly find in any other bike for the money, and you’re where you always wanted to be. Way out of sight of the competition.

OUT AND ABOUT

Whether you’re serious about relaxing, simply want to re-discover some country lanes or beat new tracks to the office, there’s a bike here for virtually anything you want to do. Forge ahead on a Frontier, break new ground on a Pioneer or ride away on the roads – simply choose Raleigh for a comfortable, pleasant, environmentally friendly way to get around.

THERE AND BACK

For you, bikes aren’t about aggression, they’re about transport. They get you there, simply, comfortably, reliably. Then they bring you back with just as little fuss. Nothing self-indulgent. Leave the heavy stuff to the others, let them wear what they like. You want a Raleigh you can cross town with, not swords.
What counts here is comfort. Sit almost upright for a relaxed, smoother ride that gives you good performance and complete control even on longer rides. You can see over traffic, too — and just as important, they can see you.

A longer wheelbase provides greater comfort, stability and balance.

A shorter wheelbase and sportier geometry provide the ideal mix of comfort, ease of operation and performance. Again, visibility is high, providing you with the optimum blend of aerodynamic positioning and ease of ride.

55°-85°

Lower back position makes for greater maneuverability, speed, power and efficiency. Cornering is easy and slick, power is instant and the shorter frame makes for a faster bike.

50°-80°

45°-75°

The ultimate road racing position. You and your bike working with the power and efficiency of a machine. Fastest control, instant reactions and minimum wind resistance are crucial factors in shaving those vital seconds off time trials or your previous best.

10°-40°

Choosing the Right Bike

It's said that we never forget how to ride a bike. But how many of us ever choose the right bike for ultimate comfort as well as performance? This guide will tell you the perfect position to be in.
Before you get interested in any bike, there are a few things you ought to know about Raleigh. Things like how over 100 years' experience of making bikes means we can always provide exceptional quality, first class build and 15 year guarantees. You'll obviously want to know that every bike comes with standard specifications that are well above standard in their class.

And you should know that as long as you choose the right bike for the purpose, it will give you as many years of perfect riding as you want it to.

Every frame is primed on both the inside and outside - unique to Raleigh - so rust is kept out at all times.

Each tube is designed to provide the perfect blend of responsiveness, rigidity and aerodynamics.

Every tube has up to five coats of paint.

Each coat is applied electro-phoretically so that it actually bonds with the coat below.

Every coat of paint is as flexible as the tube it bonds to, so there's no cracking or flaking.

Typical example of paint process.

Phosphate coating

Electro-pheretic primer

Stoving enamel first coat

Stoving enamel second coat

Polyester powder top coat

RALEIGH

EVERY
7005 Series alloy Y frames with "Triple Tube Technology", unique to Max Lite, providing strength at the heart of the frame.

All full suspension Max Lite models feature an innovative forged pivot area with industrial grade sealed bearings. Deep section chainstays and box section backstays help deliver ultimate strength and performance.

The top of the range F53 also includes massive gear choice from Sram's "ESP" 27 speed system and jaw dropping Diotech disc braking up front.

RST-22 nitrogen charged alloy rear shock gives up to 100mm rear travel

MAX LITE HT3-5

Away from it all

7005 Series alloy Y frames with "Triple Tube Technology", unique to Max Lite, providing strength at the heart of the frame.

Additionally, all hardtail Max Lite models feature an innovative rear section with elevated chainstays providing maximum mud clearance and reducing chain-slap.

The top HT3-5 hardtail comes with front disc brake as standard and the ultra-lightweight magnesium M690 fork. Quality 24 speed shifting from Shimano guarantees top all round performance.

24 speed Shimano Alivio system with Rapid Fire shifters for precise and responsive shifting.

SR-M690 magnesium suspension fork delivers 75mm travel.

Diotech disc brake for awesome stopping power.
The bike that's smart enough to give you the best of both worlds. Wide gear ratios for the heavy stuff, and a responsive frame with sports geometry and some grippy tyres make trails less of a trial. And the slick rise on the dual purpose treads, comfort saddle and lightness of frame make it a bike that deals with traffic as easily as it deals with hills.
Classic design matched to state of the art component technology makes a bike you'd be willing to sit up and beg for. Comfortable enough to take you on long journeys without strain, smooth and fun enough to make the shortest trip worth cycling. It's a bike to ride into the next century.

### Sizing Chart

The normal frame size is the measurement from the top of the seat tube (where the saddle pin fits into the frame) down to the centre of the bottom bracket axle (the axle which carries the pedal crankset). With the correct frame size you should be able to sit on the saddle and just touch the ground on either side, but you must be able to reach the handlebars comfortably. It is sometimes worth considering a smaller frame with the saddle slightly raised in order to obtain a more comfortable reach. The sizing charts give a guide to frame sizes against inside leg measurement. We recommend, however, that all bicycles are tried for size before purchase.

### Glossary of Terms

#### Gears

Raleigh use several types of gears in the range. Mountain bikes, race bikes and most Pioneers feature up to 24 indexed derailleur gears that can cope perfectly with a variety of terrains and cycling conditions.

The higher the standard, the better the name. STX, Acera-X and Alivio come from Shimano, the world’s leading gear manufacturer.

#### Index Gears

Slick, fast and efficient, indexing is the most accurate way of changing gears. Move the shifter till it clicks and the gear follows in an instant, with no need to feel for the right position. Also known as 5i5 - Shimano Index System. Dual 5i5 or Fully Indexed Gears mean that both left and right hand are indexed.

#### EZ Fire/5i5 Shifters

An ergonomically improved gear shifting system, allowing you to shift up with the thumb and down with the forefinger.

#### Gripshift

The latest in gear shifting - the handlebar grip rotates and each movement changes gear. Very popular for obvious reasons.

#### Handlebars

Raleigh uses several styles, according to the bike and how you ride it. Mountain bikes and some Pioneer Trail models have flat bars for the most responsive riding position over a wide variety of ground. Semi-raised bars, as on some other Pioneer models and some women’s mountain bikes, give a more comfortable upright position. Drop handlebars on race bikes provide a low centre of gravity and aerodynamics for extra speed and instant response.

#### Brakes

Most Raleigh bikes are fitted with cantilever brakes for effective stopping in all conditions. The V-brake is a Shimano designed long-arm cantilever which uses matching V-brake levers to provide extreme stopping power. “Power Brakes” are a similar system.

#### Frames/Forks

Hi-tensile steel - sometimes shortened to Hi-Ten - is a top quality carbon controlled steel with a high strength to weight ratio. So it’s much stronger for its weight than ordinary steel. CroMoMo - sometimes called CrMo or Cromo - is a special lightweight steel alloy with chromium and molybdenum which gives excellent response and comfort, absorbing and flexing with the ride. Highly regarded by all types of rider.
SUPPORTING NATIONAL CYCLING NETWORKS

For many people, cycling without heavy traffic is just a distant memory. If you’re lucky enough to have the memory,

Because Raleigh recognise that this simply won’t do, we’re proud to sponsor two national cycling networks, Sustrans and the National Byway, to give everyone more routes that are safe and enjoyable to ride.

Sustrans is aiming to provide a 6,500 mile national cycle network of attractive, people-friendly town and country routes where commuters, families, shoppers and above all children, can enjoy safe, healthy cycling. Soon, there will be a Sustrans route within 20 miles of every cyclist in the country.

THE NATIONAL BYWAY, which is also supported by the National Cycle Network (co-supporters of Sustrans), promotes a winding circular route round Britain’s country heritage. Using carefully selected country lanes and roads, the National Byway unlocks the potential to explore our rural landscape and gain insights into our common past.

For more information on Sustrans, or to become a member, pick up a leaflet at your nearest Raleigh stockist, or contact Sustrans, PO Box 368, Freepost SW8 764, Bristol BS99 1BR, or telephone 0117 929 6988. Fax 0117 929 4173. WEB http://www.sustrans.org.uk

You can also write to the National Byway, PO Box 178, Newark, Notts NG23 0BL. Alternatively, ring 01636 636819, or send a fax to 01636 636819 for further information.
THE RALEIGH GUARANTEE

All Raleigh bikes conform to BS5402 (British standard for bicycles). They are so well constructed, we guarantee all non aluminium frames and non suspension forks for a full 15 years, and all aluminium frames for 5 years. In addition, all our bikes carry a one year parts warranty. See your Raleigh bicycle guide for details. Many of our stockists can now offer “extra cover”, an extended warranty on Raleigh products, giving you extra peace of mind and continued worry-free cycling. For more information on “extra cover”, or any warranty queries on Raleigh products call 0115 942 0202 ext 3096 (South) or 3095 (North).

THE RALEIGH CYCLE PROTECTION REGISTER

To help you should you be unfortunate enough to have your bike stolen, Raleigh can register your new bike, free, on our unique customer computer. You have a much better chance of recovering it if you have recorded the frame number and its specifications for ease of identification. See your Raleigh bicycle guide for details.

RALEIGH INDUSTRIES LTD, NOTTINGHAM NG7 2DG, ENGLAND. TEL: 0115 942 0202
www.raleighbikes.com

Colours printed in this catalogue are as near as possible to the manufactured Raleigh product. For an accurate comparison we recommend you see the actual product on display at your Raleigh stockist. Due to our policy of continuous improvement, product specification and appearance may change whilst this catalogue is still in use.
